# Guidance for Use Case Template

Document each use case using the template shown in the Appendix. This section provides a description of each section in the use case template.

## 1. Use Case Identification

### 1.1. Use Case ID

Give each use case a unique numeric identifier, in hierarchical form: X.Y. Related use cases can be grouped in the hierarchy. Functional requirements can be traced back to a labeled use case.

### 1.2. Use Case Name

State a concise, results-oriented name for the use case. These reflect the tasks the user needs to be able to accomplish using the system. Include an action verb and a noun. Some examples:

- View part number information.
- Manually mark hypertext source and establish link to target.
- Place an order for a CD with the updated software version.

### 1.3. Use Case History

#### 1.3.1 Created By

Supply the name of the person who initially documented this use case.

#### 1.3.2 Date Created

Enter the date on which the use case was initially documented.

#### 1.3.3 Last Updated By

Supply the name of the person who performed the most recent update to the use case description.

#### 1.3.4 Date Last Updated

Enter the date on which the use case was most recently updated.

## 2. Use Case Definition

### 2.1. Actor

An actor is a person or other entity external to the software system being specified who interacts with the system and performs use cases to accomplish tasks. Different actors often correspond to different user classes, or roles, identified from the customer community that will use the product. Name the actor(s) that will be performing this use case.

## **2.2. Description**

Provide a brief description of the reason for and outcome of this use case, or a high-level description of the sequence of actions and the outcome of executing the use case.

## **2.3. Preconditions**

List any activities that must take place, or any conditions that must be true, before the use case can be started. Number each precondition. Examples:

1. User's identity has been authenticated.
2. User's computer has sufficient free memory available to launch task.

## **2.4. Postconditions**

Describe the state of the system at the conclusion of the use case execution. Number each postcondition. Examples:

1. Document contains only valid SGML tags.
2. Price of item in database has been updated with new value.

## **2.5. Priority**

Indicate the relative priority of implementing the functionality required to allow this use case to be executed. The priority scheme used must be the same as that used in the software requirements specification.

## **2.6. Frequency of Use**

Estimate the number of times this use case will be performed by the actors per some appropriate unit of time.

## **2.7. Flow of Events**

Provide a detailed description of the user actions and system responses that will take place during execution of the use case under normal, expected conditions. This dialog sequence will ultimately lead to accomplishing the goal stated in the use case name and description. This description may be written as an answer to the hypothetical question, "How do I <accomplish the task stated in the use case name>?" This is best done as a numbered list of actions performed by the actor, alternating with responses provided by the system.

## **2.8. Alternative Flows**

Document other, legitimate usage scenarios that can take place within this use case separately in this section. State the alternative course, and describe any differences in the sequence of steps that take place. Number each alternative course using the Use Case ID as a prefix, followed by "AC" to indicate "Alternative Course". Example: X.Y.AC.1.

## **2.9. Exceptions**

Describe any anticipated error conditions that could occur during execution of the use case, and define how the system is to respond to those conditions. Also, describe how the system is to respond if the use

case execution fails for some unanticipated reason. Number each exception using the Use Case ID as a prefix, followed by “EX” to indicate “Exception”. Example: X.Y.EX.1.

## **2.10. Includes**

List any other use cases that are included (“called”) by this use case. Common functionality that appears in multiple use cases can be split out into a separate use case that is included by the ones that need that common functionality.

## **2.11. Special Requirements**

Identify any additional requirements, such as nonfunctional requirements, for the use case that may need to be addressed during design or implementation. These may include performance requirements or other quality attributes.

## **2.12. Assumptions**

List any assumptions that were made in the analysis that led to accepting this use case into the product description and writing the use case description.

## **2.13. Notes and Issues**

List any additional comments about this use case or any remaining open issues or TBDs (To Be Determineds) that must be resolved. Identify who will resolve each issue, the due date, and what the resolution ultimately is.

# Use Case Template

Use Case ID:	001		
Use Case Name:	Create Account		
Created By:	Sebastian, Alicia	Last Updated By:	Alicia
Date Created:	29/1/22	Date Last Updated:	29/1/22

Actor:	User (Initiating Actor), Account System
Description:	The user is creating an account
Preconditions:	1. The User must not have an account.
Postconditions:	1. The User has created an account.
Priority:	
Frequency of Use:	
Flow of Events:	<ol style="list-style-type: none"> <li>1. The User selects "Create Account" button</li> <li>2. The application requests for the User's username, email and password</li> <li>3. The User enters their username, email and password</li> <li>4. The User ticks the terms and conditions box.</li> <li>5. The User selects the "Register" button</li> <li>6. The application checks if there are any existing users with the same email and if not, stores the information with the Account System</li> <li>7. The application then confirms with the user that their account has been created and prompts the user to login.</li> </ol>
Alternative Flows:	<p>AF1-S5: The User has not ticked the terms and conditions box.</p> <ol style="list-style-type: none"> <li>1. The application would display "Unchecked Terms and Conditions."</li> <li>2. The application returns to step 2.</li> </ol> <p>AF2-S6: There is an existing user with the same email</p> <ol style="list-style-type: none"> <li>1. The application would display "Email already in use."</li> <li>2. The application returns to step 2.</li> </ol> <p>AF3-S6: The email format is wrong.</p> <ol style="list-style-type: none"> <li>1. The application would display "Invalid Email Format."</li> <li>2. The application returns to step 2.</li> </ol> <p>AF4-S7: The user has not verified his email.</p> <ol style="list-style-type: none"> <li>1. The application would display "Email not verified."</li> <li>2. The application returns to step 2.</li> </ol>
Exceptions:	-
Includes:	-
Special Requirements:	-
Assumptions:	1. The User has installed the application.
Notes and Issues:	-

Assumptions:	-
Notes and Issues:	-

A mobile application login screen mockup. The screen is titled "Login" at the top left. The status bar at the top shows signal strength, a lock icon, and 100% battery. Below the title is a back arrow and the text "Log In". The form has two input fields: "Email" with the placeholder "Your name" and "Password" with the placeholder "study@email.com". Below the password field are two links: "Create Account" and "Forgot password". At the bottom is a large blue "Login" button.
